

Case Study: Conversational Emotion Extraction

Brainapptica · Full-stack, AI-first Developer

Context

We build production AI systems where approximate correctness is not acceptable. Most of the work happens before the spec is clear. The brief is deliberately underspecified for that reason: we want to see how you frame the problem before solving it.

The task

Build a conversational app that talks to a user about their day in English and extracts negative emotions from the conversation.

Deliverables

- 1 GitHub repo, public or shared with us, with a README that lets us run it locally if we want to.
- 2 Deployed app, reachable at a URL with no setup required from our side. Whatever hosting and auth approach makes sense.
- 3 Walkthrough call, 10–15 minutes. Show the app working, explain the decisions you made, and tell us what you'd do differently with another week.

Constraints

- **Effort:** no more than two days. Submit something honest about that ceiling rather than something polished beyond it.
- **Stack:** your choice. We don't prescribe languages, frameworks, hosting, or model providers.
- **Language:** English-only conversation.
- **Cost:** assume your own API credits. Don't burn through them. That's also a decision.
- **Clarifications:** don't ask us to fill in the gaps. Make assumptions, write them down, defend them on the call.

What we evaluate

The work itself, but specifically:

- **Judgment under ambiguity.** What you chose to build, what you chose not to build, why.
- **AI-first instinct.** Where you reached for a model, where you didn't, and how you'd know the system is working.
- **End-to-end ownership.** Schema, interface, deploy, and the glue between them, even at minimum-viable depth.
- **Honesty.** A small system that works and that you understand cold beats a large system you can't defend.

We will not score you on visual polish, feature count, or whether you guessed the “right” definition of negative emotion. There isn't one.

Submission

Send the repo link, deploy URL, and proposed times for the call to:

`martinfridrich@brainapptica.com`

Plan for the call within a week of submission.
